

HemanthKumar Karumanchi Ramakrishnan

Data Analyst • Tableau Expert

+1(201)565-4968 |  hk378@njit.edu |  hemanthkr |  krhemanth

Skills

Programming	: Python, R, SAS, C, SQL, HTML5, CSS3, PHP
Database Development	: MS SQL server, Oracle DB, MySQL, MongoDB, PostgreSQL
Analytical Tools	: Tableau, Rapidminer, SAP, Apache Superset, Google Analytics, MS Power BI
Python Libraries	: numpy, pandas, seaborn, scikit-learn, beautifulsoup4, Keras, Tensorflow
Other IDEs	: Spyder, Jupyter Notebook, RStudio, MS Visio, Axure RP, Git
Functional Skills	: Agile & Scrum Methodologies, Business Process Modeling, Requirement Analysis

Internships

Data Engineer at VentureSpace Inc., New York Aug 2018 – Dec 2018

- Implemented web scraping techniques using python for collecting data that empowered Real estate brokers.
- Modified and analyzed the pre-existing data tables by SQL queries, which was later stored in PostgreSQL database.
- Built visualization dashboards from the analysis made, using Apache superset and Tableau for report generation.

Data Analyst at Komeeda, New York May 2018 - Jul 2018

- Analyzed 10K + records of users over 2 years using Google analytics to identify various segment of customers.
- Developed promotional strategies targeting page viewers segment to increase the customer acquisition rate.

Education

Master of Science, Information Systems Sep 2017 - May 2019

New Jersey Institute of Technology, New Jersey, U.S.A.

CGPA:3.7

Relevant Courses: Machine Learning, Web Mining using Python, Statistical Analysis with SAS & R, User Experience Design, Data Analytics with R, Database Management, Big Data (AWS / Hadoop), Data Analytics for Information System.

Bachelor of Science, Electronics and Communication

Anna University, Chennai, India

Aug 2013 - Apr 2017

CGPA:3.5

Projects

TMDB Box Office Prediction [Kaggle competition, Data Wrangling, Feature Representation, XG Boost] Mar 2019 - Apr 2019

- Feature representation was done to extract the information from column type List of Dictionary. And did Data wrangling to replace the null values and Improved Data quality by Log scaling to respond towards skewness of large values.
- Feature selection was done by correlation and created dummy variables for it and fitted this processed data to XG Boost Classifier and Predicted the Worldwide box office revenue getting RMS score of 2.08, fetching me Top 25% Rank in Kaggle competition.

Sentimental Analysis on Yelp Reviews dataset [Natural Language Processing, NLTK, Ensemble Learning] Oct 2018 - Dec 2018

- Taking raw dataset from Kaggle, Data munging was done to remove stop words and balanced the positive and negative reviews by down-sampling. Predictive correlation was conducted between multiple features based on reviews.
- Passed the data into multiple machine learning algorithms and found best fit algorithm was multilayer Perceptron Classifier with 77.25% accuracy and used it for testing future reviews for classification into good or bad.

No-Show Medical Appointment [Feature Engineering, GBM, RFC]

Mar 2018 - Apr 2018

- Exploratory data analysis was done by collecting data of 1000K+ medical appointments in Brazil from UCI Machine Learning repository and performed data wrangling using python. And analyzed the importance of each feature by visualization.
- Prioritizing the top attributes of the given data by gradient boosting machine and Random Forest classifiers returning f-score of 0.44 which created impact to predict whether patients turn up for any future medical appointment or not.

A/B Testing [Probability, statsmodels, scipy]

Feb 2018 - Mar 2018

- Hypothesis testing was done on e-commerce website by measuring their website loyalty rate, used 100K+ sample data and made comparison between their new and old website style.
- Concluding that the alternative hypothesis is true at the 95% confidence level. Thereby having strong evidence to reject null hypothesis. Proving that their old website drew more customer traffic than their new website.

Certifications

- Machine Learning from Udemy
- Nanodegree in Data Analyst from Udacity
- Python Programming in Coursera
- R for Data Science from edX
- MongoDB Basics from MongoDB University
- Tableau Desktop Specialist Certified
- Advanced Google Analytics Certified
- Bloomberg Marketing Concepts Certified
